

## Project Design Phase Proposed Solution

Date	22 October 2023
Team ID	Team - 590941
Project Name	News Nest An Android Application For Keeping Up With The Latest Headlines
Maximum Marks	2 Marks

**Team Members:** Parimi Monish, Mohith Tadi, Allu Deva Sai Vishnu Vardhan & Manthri Ashish

### Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	How might we easily provide news to the users briefly in less time in an app with clean and catchy environment ?
2.	Idea / Solution description	The idea is to provide efficient push notifications deliver personalized, trending news based on individual interests and preferences from diverse regions, presented through a user-friendly interface free from intrusive ads, ensuring live updates within seconds.
3.	Novelty / Uniqueness	The novelty of our news app lie in its ability to seamlessly deliver tailored, trending news to users based on their distinct interests and preferences, with a clean and ad-free UI. Additionally, the app ensures live updates in realtime, providing a highly efficient and personalized news consumption experience that surpasses existing platforms.
4.	Social Impact / Customer Satisfaction	Our app ensures a profound social impact by empowering customers with personalized, ad-free news, providing diverse perspectives, saving their time, and elevating both global and local awareness, resulting in heightened customer satisfaction and a positive, distraction-free news experience that keeps them engaged, informed, and empowered.
5.	Business Model (Revenue Model)	Our app's revenue model encompasses a combination of subscription-based access, in-app purchases, sponsored content, donation-based support and in future partnerships and affiliate marketing, ensuring a diversified income stream while delivering value to our users.
6.	Scalability of the Solution	The scalability of our app is high, as it can easily accommodate a growing number of users and adapt to increased demands for personalized news delivery, without compromising performance or user experience. Our app's infrastructure and features are designed to efficiently handle a large user base and evolving content preferences. This means that as the user community expands, our app can scale up seamlessly to meet their needs.
